Dear Whittier Elks Lodge,

We are the Washington Middle School Wind Wolves and we are researching and gaining support for installation of renewable energy at our school. We have successfully participated in the Lexus Eco Challenge Land and Water Challenge, and were chosen as one of only two middle school team finalists from the western region of the United States. Although we are very proud of our achievements, we are NOT STOPPING! We are now working on cleaning our air by pursuing the challenge of renewable energies.

Our biggest goal for this project is to help clean the environment as much as possible. We are researching two kinds of renewable energy for our school, a wind turbine and solar panels. Our hope is to help clean our air as well as hopefully reduce the energy costs for our school. Because we want to best understand the many aspects of the safety, viability, and costs for installation of these two types of renewables, we are reaching out to community organizations in hopes of support. We are currently reaching out to all the local businesses and organizations for help in our research as well as possible funding assistance. This brings up the question, would you please be willing to help us in our pursuit for renewable energy at our school?

We are more than willing to speak to your organization to better explain the research we have currently achieved, and explain our dream for renewable energy. The help you give us could possibly make the difference in us achieving our goals of helping both our school and our community in tremendous ways.

For direct contact, please email us at [wmswindwolves77@gmail.com](mailto:wmswindwolves77@gmail.com) or you can reach our teacher moderator, Dr. Pritchard, directly at [drpsciencerocks@gmail.com](mailto:drpsciencerocks@gmail.com). We are all hoping you can help us in any way possible. Thank you for taking your time to read our request and we look forward to hearing from you.

Sincerely,

The WMS Wind Wolves
