Dear WMS Wind Wolves,

I applaud your efforts on behalf of Washington Middle School as well as the city of La Habra in pursuing the possibility of installation of renewable energy at the school site. I am very impressed that you have reached out to so many experts to learn about both solar and wind energy, the benefits of both and the hurdles that must be surpassed to successfully install these climate-saving energy sources.

I have learned that you spoke directly with environmentalist and actor Ed Begley, Jr. and have learned a great deal about the history of "clean energy" in California. I am very glad you are following up on the leads Mr. Begley gave you.

It is also news that you are connecting to a Raptor Specialist, Mrs. Maria Britton, since it is very important knowing if the Washington Middle School campus is a viable location for a wind turbine, as safe location for our bird life.

The La Habra Collaborative is all about healthy lifestyles and healthy living. Your efforts on behalf of the school and city to obtain renewable energy installations at Washington Middle School are a huge part of a healthy environment and healthy living. I enthusiastically support your work and look forward to hearing about your progress. Please know that the La Habra Collaborative supports your efforts and is ready to help you spread the word about your goals and hopes for both solar and wind energy installations at Washington Middle School.

Sincerely,

Sandi Baltes

Executive Director  
La Habra Collaborative
